

IOS APP BUSINESS PLAN

Momentum Habit Coach

An on-device
100% margin

SwiftUI

\$0 API Cost

01 - CONCEPT

The Big Idea

THE GAP IN THE MARKET

Every AI habit app requires a cloud subscription. Users are increasingly privacy-conscious and subscription-fatigued. **Momentum** delivers AI-powered coaching entirely on-device — no server, no monthly API cost, no privacy tradeoff.

The positioning is powerful: *"Your AI habit coach lives on your phone. Not in a server farm."*

WHY YOU CAN BUILD THIS

- **StoreKit 2** — already in your toolkit ✅
- **SwiftUI MVVM** — your native architecture ✅
- **SwiftData / CoreData** — local persistence, no backend ✅
- **Core ML** — new skill, great YouTube content 🎯
- **WidgetKit** — high-retention feature, highly searchable 🎯
- **HealthKit** — premium differentiator 🎯

02 — FEATURES

Full Feature Set

CORE (FREE)

- Up to **3 habits** tracked
- **Daily check-in** with streak counter

- **Basic stats** — weekly completion rate
- **1 Lock Screen widget** — streak display
- **Reminders** — UNUserNotificationCenter
- **Light/dark mode** adaptive UI
- **iCloud sync** (same device, free tier)

PRO — AI LAYER

- **Unlimited habits** + categories
- **On-device AI nudges** — Core ML pattern detection
- **Mood check-in** with sentiment analysis
- **Predictive failure alerts** ("You usually skip Fridays")
- **Habit correlation insights** ("Sleep affects your workout")
- **Weekly AI recap** — generated locally
- **All 4 widget sizes** — home + lock screen
- **HealthKit integration** — steps, sleep, HRV
- **Custom streak themes** + icons
- **iCloud sync** across devices

→ **CSV export**

WIDGETS (ALL PLANS)

- **Lock Screen small** — today's streak
- **Home Screen 2×2** — habit grid (Pro)
- **Home Screen 4×2** — progress bar (Pro)
- **Standby mode** — full-screen display (Pro)
- **Live Activity** — active habit timer (Pro)

03 — MONETIZATION

Revenue Model

FREE TIER

Forever free · Acquisition engine

- 3 habits max
- Basic streaks + stats
- 1 widget
- Daily reminders

RECOMMENDED

MOMENTUM PRO

\$2.99/mo

or \$19.99/yr · 7-day free trial

- **Everything in Free**
- **Unlimited habits**
- **All AI coaching features**
- **All widgets + Standby**
- **HealthKit sync**
- **iCloud multi-device**

SECONDARY REVENUE

Tip Jar

\$1.99 / \$4.99 / \$9.99 one-time consumables. You've already built this 

Lifetime Deal

\$39.99 one-time — great for launch week LTV boost

App Clip

Lightweight onboarding → convert cold traffic to installs

04 - PROJECTIONS

Revenue Scenarios

MONTHLY ESTIMATE

Conservative (200 subs)	~\$400/mo
Realistic (1,000 subs)	~\$2,000/mo
Good (3,000 subs)	~\$6,000/mo
Great (8,000 subs)	~\$16,000/mo

MARGIN MATH

- **API cost** — \$0/month (on-device)
- **Hosting / backend** — \$0 (CloudKit is free)
- **Apple cut** — 30% (15% after yr 1)
- **Developer account** — \$99/yr $\approx$ \$8/mo
- **Net margin** — ~85% after Apple's cut
- **Break-even** — ~5 subscribers covers dev account

05 — TECH STACK

Architecture

SwiftUI

UI layer, MVVM, animations

Core ML

On-device AI nudges + pattern detection

SwiftData

Local persistence, no backend

CloudKit

Free iCloud sync across devices

WidgetKit

Home, lock screen, Standby

HealthKit

Steps, sleep, HRV integration

StoreKit 2

Subscriptions + tip jar  done

UserNotifications

CORE ML STRATEGY (THE AI HOOK)

You don't need to train a custom model from scratch. Use a combination of:

- **CreateML** — train on user's own habit history to predict
TabularRegressor success likelihood per habit per day
- **NaturalLanguage** — sentiment analysis on mood journal entries,
framework zero setup required
- **Rule-based** — pattern matching ("3 misses = at-risk alert") +
engine present it as AI in the UX
- **On-device** — model updates locally as user builds history,
personalization no cloud needed

06 - POSITIONING

How You Win

100% Private

No data ever leaves the device. Position against Habitica, Streaks, and any cloud AI — huge

differentiator in 2025's privacy-aware market.

No Subscription API Tax

Competitors charging \$9.99+/mo to cover server + LLM API costs. You charge \$2.99 and keep 85%+ margin. Price wins.

HealthKit Correlation

Most habit apps ignore health data. "Your workout habit is 40% more likely when you sleep 7+ hrs" — nobody else does this at this price point.

Best-in-Class Widgets

Standby mode + Live Activities + Lock Screen = the widget set most apps are still catching up on. First impressions in App Store screenshots.

Build Phases

1

MVP — Core Tracker (Weeks 1–4)

SwiftUI habit CRUD, SwiftData persistence, streak logic, basic notifications, StoreKit 2 paywall, App Store submission. **Ship fast, start collecting reviews.**

2

Widgets + Polish (Weeks 5–7)

WidgetKit integration across all 5 widget types, Standby mode support, Live Activities for active timers, UI refinement pass, onboarding flow.

3

AI Layer (Weeks 8–11)

Core ML model integration, NaturalLanguage mood analysis, pattern detection engine, AI nudge notification system, weekly recap generation. **This is the marketing hook.**

4

HealthKit + Growth (Weeks 12+)

HealthKit correlation features, CloudKit multi-device sync, App Clip, ASO optimization, YouTube content series launch around each phase.

YouTube Series Angles

Each build phase = 2–3 videos. The app builds your channel while your channel markets the app.

01

I built an AI habit app with zero API costs — here's how

Hook video — positions the whole series, explains Core ML vs cloud AI

02

SwiftUI Habit Tracker from scratch — full build with SwiftData

Phase 1 build — searchable, tutorial-style, high subscriber conversion

03

WidgetKit in 2025 — Lock Screen, Standby, and Live Activities

Phase 2 — highly searched term, great for discoverability

04

Adding on-device AI to my iOS app using Core ML (no API key)

Phase 3 — your channel's signature angle, high engagement from AI audience

05

6-month App Store income report — my habit tracker made \$X

Transparency video — massive engagement, builds trust, drives downloads

BOTTOM LINE

Build this app.

It uses every skill you already have, teaches Core ML for YouTube content value, costs \$0/month to operate, and targets the highest-converting niche in the App Store.

\$0/mo operating cost

~85% net margin

5 YouTube videos built-in
